

4.2—INTERSTATE LIGHTING PROGRAM AND LIGHTING PERMITS ON STATE HIGHWAYS

Electrical Engineer Manager in Bridge Design Section is the Program Manager overseeing the Interstate Lighting program and lighting permits on state highways. For Interstate highways, DOTD administers a program to fund a portion of the initial installation costs. Local governments must enter into an agreement to maintain and operate the lighting. If lighting is installed along state highways, it must be paid for, owned, maintained, and operated by the local government (city, town, or parish). A permit must be obtained from DOTD prior to any installation work so that we can ensure that the lighting meets all safety requirements.

Refer to LADOTD bridge design website for program details.
