October Key Message: Advancing e-Ticketing with HaulHub

As we continue enhancing our digital construction management tools, e-Ticketing is at the forefront of innovation. Our integration with HaulHub is now live with 11 suppliers, and several contractors have begun connecting their equipment using onboard telematics. These real-time updates streamline operations and provide active construction alerts to the traveling public through navigation apps, ensuring safer travel.

We encourage all project teams to onboard their projects and begin using the e-Ticketing software. This will not only help standardize data collection and reporting but also improve communication between suppliers, contractors, and DOTD teams. Get started today to ensure your project benefits from these cutting-edge tools. It's as easy as an email to:

Construction Roundup Tour Fall 2024

This month, our Construction Roundup meetings will take place in-person across Louisiana. These sessions are a great opportunity to discuss ongoing challenges, learn about new procedures, and network with fellow industry professionals. If you are attending one of the meetings, we invite you to submit topics you'd like to discuss using the QR code below (scan or click). Let's keep the conversation moving forward together!

HeadLight Heroes

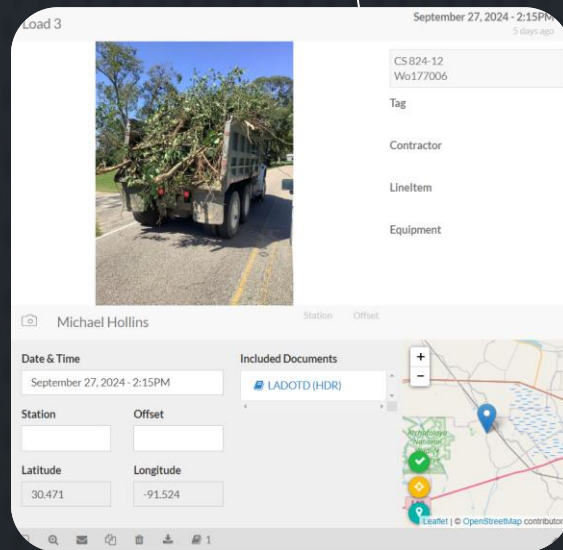

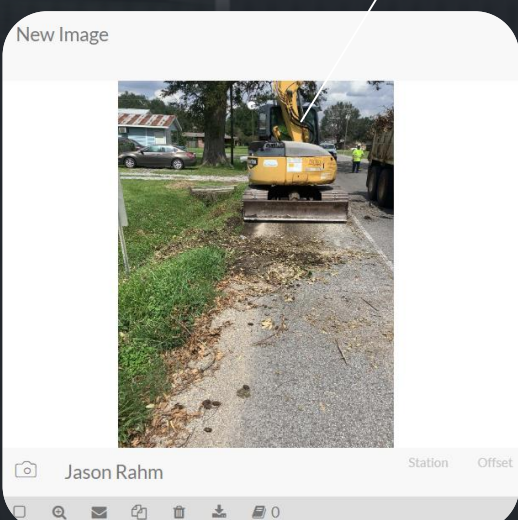

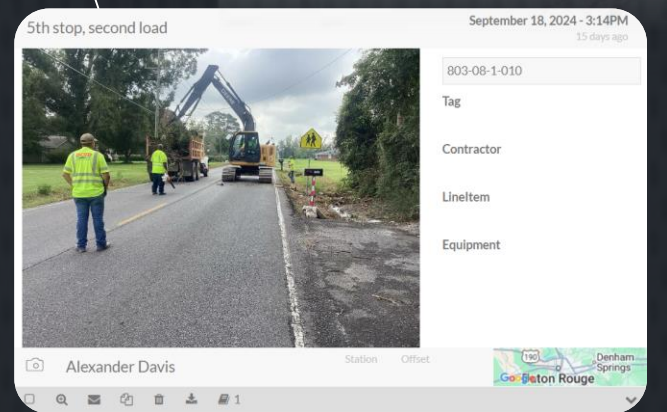

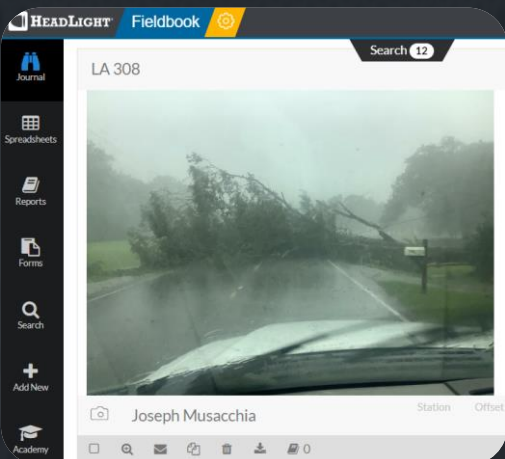

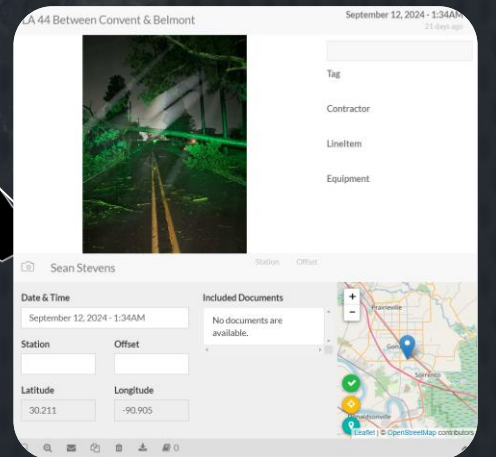

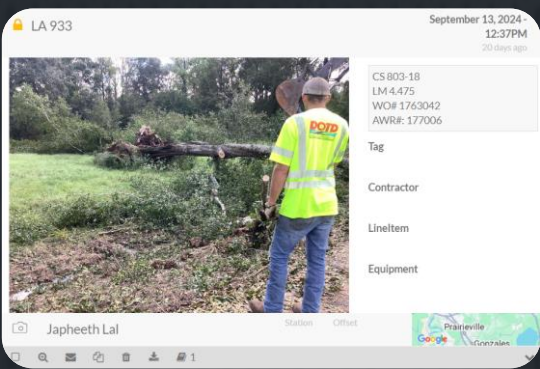

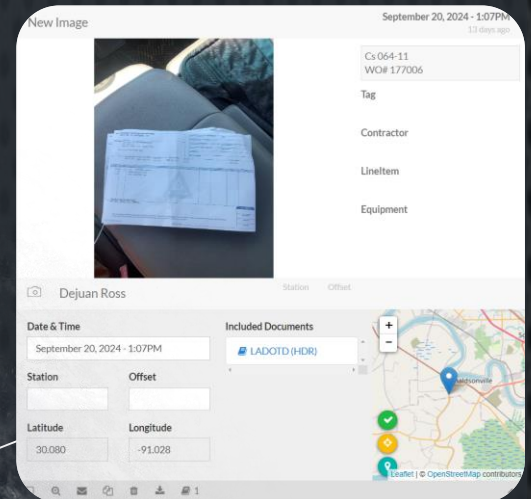

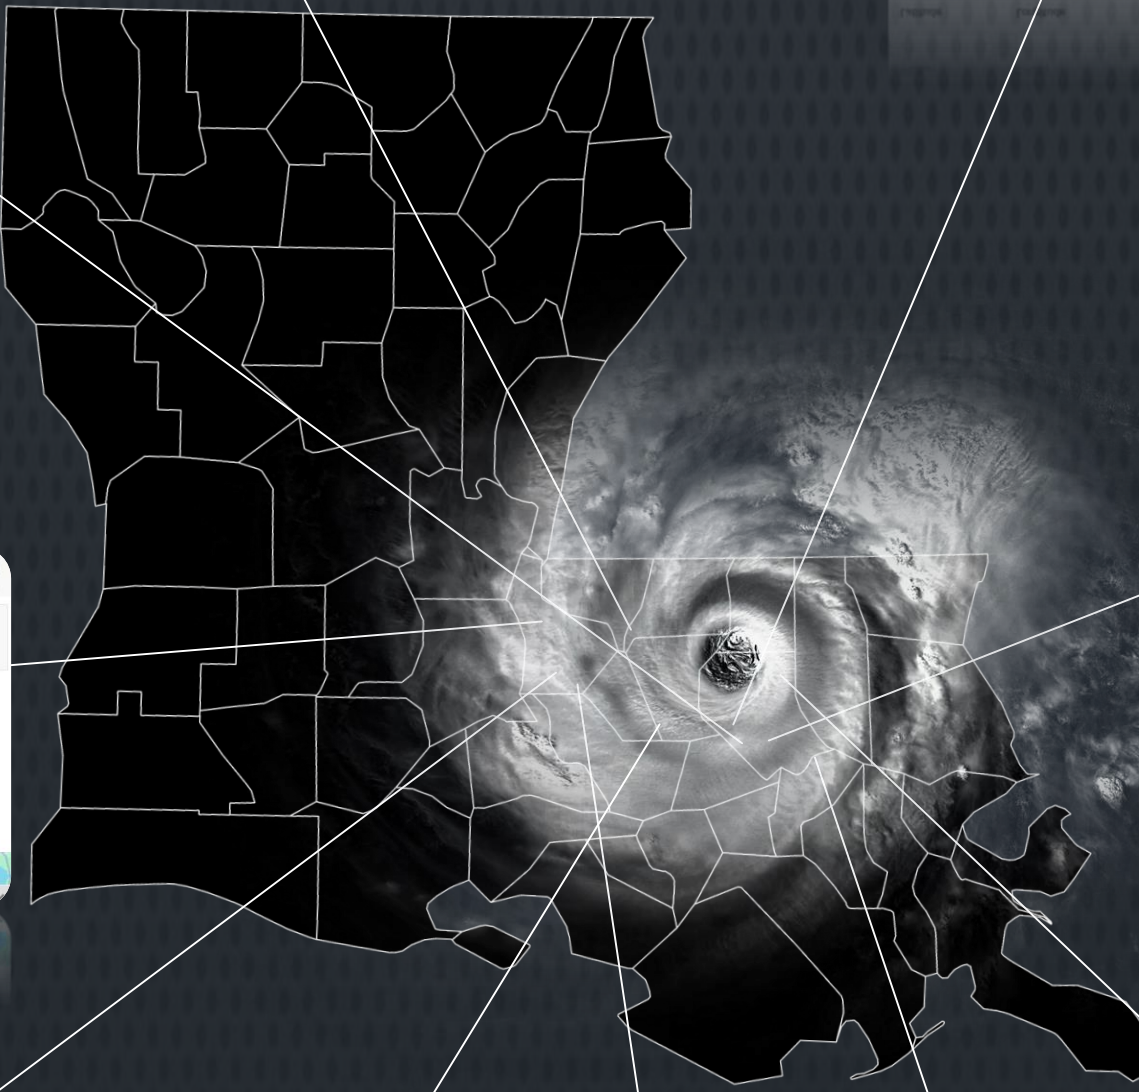

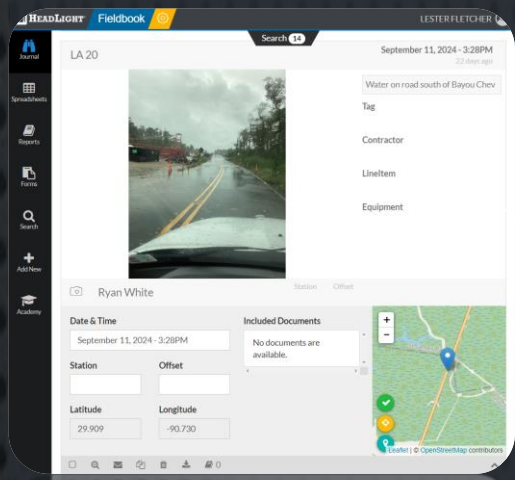

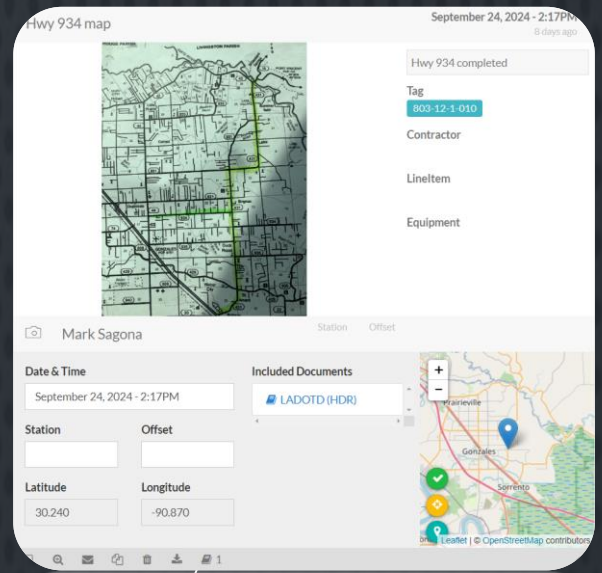

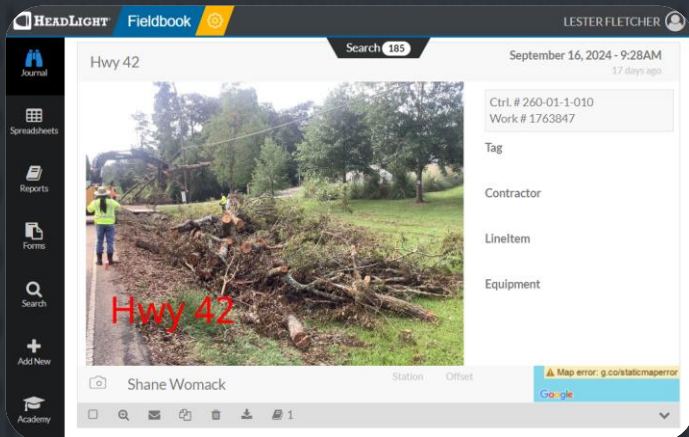

District 61's Exceptional Documentation in Hurricane Francine Recovery

This month, we're proud to recognize a team from District 61 as the October HeadLight Heroes for their outstanding documentation efforts during the recovery after Hurricane Francine. Utilizing a HeadLight project, the District 61 team captured and documented the recovery process with incredible detail, recording over 1,100 observations. Out of these, more than 900 were powerful image-based observations that vividly depict the scale of the restoration efforts.

Their thorough and timely documentation played a crucial role in ensuring accurate tracking of damage and recovery activities, allowing the team to swiftly address critical needs and provide comprehensive records for future reference. The images offer a clear narrative of the challenges faced and the solutions implemented during this pivotal time. District 61's efforts serve as an exemplary model of using HeadLight technology to enhance transparency and efficiency in crisis response.

A big thank you to the entire team for their hard work and dedication!

- 28:15 Q&A
- 47:35 Closing Remarks

e-Construction Highlights

District 02 Construction Roundup Meeting

October kicked off with great momentum as we held our first in-person Construction Roundup meeting in District 02 (New Orleans). e-Construction Engineer Patrick Icenogle delivered a presentation on the ADCMS grant opportunity and HaulHub, highlighting several ongoing initiatives and exciting developments. This was followed by Tranisha Burks and DJ Weymouth from HeadLight, who provided an update on the latest advancements with the HeadLight software and touched on what to expect with the introduction of the contract administration software.

While we won't dive too deeply into the details just yet, stay tuned! Next month, we'll provide a comprehensive recap of the meetings and share key takeaways from our statewide tour, which wraps up in early November.

Not all Heroes Wear Capes

A special thanks goes out to Mark Hartman from Ergon, and Ryan Casto and Colby Moore with Material Resources Inc., for providing lunch at our recent Construction Roundup meeting. We appreciate their hard work, not just in under the cook tent but also in their dedication to supporting our construction community.
