**APPENDIX A – PROJECT LAYOUT PLAN**  
**APPENDIX B – PROPOSED FUTURE BUILD OUT**

## 1.0 INTRODUCTION

This Part 4 – Request for Proposals Plans contains two Project layout plans to be used for the Project. The proposed Project Layout Plan contained herein shows the layout that defines the current design-build project phase. The Proposed Future Build Out contained herein shows the ultimate project layout that will be completed in future project phase(s) by others. The Design-Builder will be required to produce Directive Plans based on both these layouts in order to depict the potential areas of rework and the overall interface that will be required from the current Design-Build Phase and the Future Build-Out Phase. These Plans are categorized as having both directive and indicative features.

## 2.0 DIRECTIVE AND INDICATIVE PLAN CATEGORIZATION

The Project layout plans are categorized as directive for the project limits, the minimum clearances shown, the number of mainline lanes to be provided and the locations where bridge structures are to be used.

The Project layout plans are categorized as indicative in all other aspects.

The Design-Builder shall use the Project Layout Plan to develop the final design of the proposed facility, and shall use the Future Build-Out Phase Layout plan to develop the directive plans for the future phased project.

The Project layout plans may be modified as required by the Design-Builder's final design efforts. However, any changes to the Project layout plan that reduce capacity will require approval of the Louisiana Department of Transportation and Development.
