2059 Report (Selection 3 on Report Request Screen)

The MATT generated "Special Report for 2059" is a portion of the Department's Quality Assurance Documents Files which are submitted at the end of the construction project for final acceptance and payment.

This is a summary report which has a basic format similar to the logging report, except that the MATT Special Report for 2059 is composed of three parts.

- Part 1** Consists of a list of all the materials entered in the MATT System for the specified project appearing in contract item number order.
- Part 2** Consists of a list of approved asphaltic concrete job mix formulas and Portland Cement concrete mix designs entered in the MATT System for the specified project.
- Part 3** Consists of a list of failing samples in the MATT System for the specified project along with remarks indicating the disposition of the failing material, known as disposition remarks (Remarks 2). The Remarks 2 field is designated solely for the purpose of indicating the disposition of failing materials. Refer to Sample Identification, Remarks 2, for details concerning disposition remarks.
