

# Crash DART

Bryan Costello, P.E.

# Crash What?

- Data
- Analysis &
- Research
- Tool

- Formerly known as Crash Data Analyzer

# Big Picture Process

# History & Need

- 2011
  - No known crash data analysis tools
  - Need: replicatable platform
  - Account for errors
  - Oct DTOE – v5
- 2012 Autumn
  - Error detection
  - Input tab
- 2013 Autumn – Research
- 2015 Spring
  - Improved layout by grouping similar features
  - Improved input through drop-down options
- 2015 June – Annual Traffic Engineer – v29x

# v.5 versus v.29x

## Version 5

- Upgradable elements
  - Collision type
  - Accident type
  - Lighting
  - Surface condition
  - Intersection
  - Location
- Total summary report
- Crash Rate (Single ADT)
- Location spread
- Crash1 only

## Version 29x

- Upgradable elements
  - Alcohol
  - Parish
  - Travel Direction
  - Intersection ID
- Analysis Summary Report
- Crash Rate (multiple years)
- Input page
- Over-represented spreads
- Before & After
- Crash1 or Crash3

# Unique Features

fulfill unmet needs

- Notes
- Solution
- Upgradeable elements – 10
- Error Detection – 6
  - Intersection & Intersection ID mismatch
  - Control-section v Parish
  - Collision type v Travel Directions
  - Collision type v Accident type
  - Hour v Lighting
  - Collision type & Intersection mismatch
- Prioritizes review

# Crash1 Needs

## 6. Indicate optional items to include in Report:

- |  |   |
|--|---|
| <input type="checkbox"/> ADT                         | <input checked="" type="checkbox"/> Alcohol Involvement           |
| <input type="checkbox"/> Vehicle Type                | <input type="checkbox"/> Intersection Quadrant                    |
| <input type="checkbox"/> Lat/Long as entered on form | <input checked="" type="checkbox"/> Lat/Long as revised by LADOTD |
| <input type="checkbox"/> Spotted By                  | <input checked="" type="checkbox"/> Intersection ID               |
| <input type="checkbox"/> LRS_ID                      | <input type="checkbox"/> LRS Logmile                              |

# Start – Assumptions

<i>Assumptions &amp; Explanations</i>	
1	
2	<b>Read this column first</b>
3	DART => Data Analysis Research Tool
4	
<i>Assumptions</i>	
6	Those using this tool are Engineers, capable of making Engineering judgments.
8	The road segment under examination shall be geometrically & operationally homogeneous. The analysis is geared toward motorized vehicles following the lead of the Louisiana Motor Vehicle Traffic Crash Report.
12	Only tab's "sum", "B&A", "location", "ORL", "CToD", "QC&T", or "Ref" shall be printed
14	Without vetting, the results are only as good as the crash data. Vet the higher priority crashes to attain better results. Vetting is accomplished by correcting errors.
17	You already have access to Crash1, the Abnormal
18	< <a href="http://enrapps/crash1r/abnormal.asp">http://enrapps/crash1r/abnormal.asp</a> >, ThinkStream, Surface
19	type log file , and Highway Geographic features. The last two are
20	the sixth and fifth links respectively under "Highway Inventories"
21	at < <a href="http://enrapps/hwvinfo/home.aspx">http://enrapps/hwvinfo/home.aspx</a> >.
	<span>All crash</span> <span>sum</span> <span>B&amp;A</span> <span>location</span> <span>ORL</span> <span>inputs</span> <span>start</span> <span>CToD</span> <span>QC&amp;T</span> <span>CM</span>

# Start – Tabs

	I	J	K	L	M
1	<b><i>Tab Explanations</i></b>				
124		Status 2 notes whether the crash has been reviewed, a solution proposed, and the location verified.			All crash
125					
126		Status 3 notes whether any potential errors have been determined by the error detection functions.			
127					
128		Status 4 notes whether the crash has been documented for research. Part of Directions D - Advanced Evaluation.			All crash
129					
130		Status 5 notes whether the crash has been reported in external documents to report errors. Part of Directions D.			
131					
132	unique	The Errors Detection section has several error detecting functions. On the infrequent occasion where the crash was coded correctly, but an error persists, you can {Copy&Paste} the cell in row 612 into that column.			All crash
133					
134					
135					
136	unique	Coll & Angle Agreement compares the travel directions to the Collision type. This function has a high accuracy rate when excluding the few crashes where U-turn occurs.			All crash
137					
138					
139	unique	Coll & Acc Agreement compare the Accident type to the Collision type and compares the number of travel directions to the Collision type. This function has a high accuracy rate for Issues 1, 2, and 3. Issues 8 & 9 flag high error types, but may be correct.			All crash
140					
141					
142					
143					

# Inputs – All

	A	B	C	D	E	F
1		Name	Input		Suggested	Notes
3		All Analysis				
4						
5		Analysis Type	Segment		Segment	Method by which the analysis will be conducted. Choose the desired value from the drop-down box. This value affects the output on the "sum" tab.
6					Intersection	
7						
8		Land Use / Area Type	Urban		Urban	Area type surrounding the road. Choose the appropriate value from the drop-down box. This value affects the Average Column below.
9					Rural	
10						
11		Highway Type	2-Lane			Highway type analyzing. Choose the appropriate value from the drop-down box. This value affects the Average Column below. Odd number of lanes are typically a center two-way-turn-lane.
12			2-Lane			
13		Average Column	3-Lane		AU	Letter of column from the "average" tab. Notice that there are three sets of data. This affects the output on the "sum" tab.
14			4-Lane		Urban	
15			4-Lane Divided			
16		First Year of Analysis	6-Lane		2010	The first whole year of data to evaluate on the "sum" tab.
17			6-Lane Interstate			
18		Last Year of Analysis	2013		2013	The last whole year of data to evaluate on the "sum" tab.
19						
20		First Year of Data	2009		2009	The first year of data from your query.
21						

# Inputs – Segment

	A	B	C	D	E	F
1		Name	Input		Suggested	Notes
23		Segment Analysis				
24						
25						The primary method by which the crashes are located. Choose the appropriate value from the drop-down box. If using multiple Control-sections, use Mile Point.
26		Location Method	Log Mile		Log Mile	
27					Mile Point	
28						
29		Length	1.19		1.19	Length of segment, in miles. Value is ignored for intersections.
30			6283	ft.	6283	
31		Pages	3		3	Number of pages to spread the crashes through. No more than 8 and no less than 1.
32						
33		Increment	0.033		0.034	Size, in miles, of the "location bucket" to divide the segment of road into for location analysis.
34			176	ft.	180	
35						
36		Speed Preference	Speed Limit		Speed Limit	The legal speed limit set for a section of road if different than the state statutory speed limit of 55.
37					85th Percentile Speed	A statistical value of the speeds taken from a speed study performed with no adverse conditions to artificially limit the speeds surveyed.
38						
39		Speed Limit	50			The speed preference of each part of the road segment. If the 85th percentile is unknown, use the speed limit. If more are needed place these appropriately within the "by location" tab. There is a map of speed limits available at < <a href="http://ladotnet/planning/pms/">http://ladotnet/planning/pms/</a> > as the sixth option of the left titled "PMS Road Conditions".
40			50			
41			50			
42			50			
43			50			
44						
45		Issue Threshold	0.85		0.85	Percentile of crashes used to determine if a "location bucket" is an "issue".

1	<b>Potential Countermeasures for Identified Crash Types</b>			
2				
3	Crash Type	Possible Cause	Countermeasure	Notes
187	Rear-End or Side-Swipe	Old right-turn slip lane design	Redesign splitter island.	For perpendicular roads, the length (along approach) should be twice the width.
188			Improve right-turn slip-lane design to ensure either:	
189			(A) it empties into its own lane with current acceleration & taper lengths	
190			OR	
191			(B) the yield-line is not more than 30° from parallel to the entry road	to ensure there is not less than 60° between vehicle flows
192	Driver Behavior	All	Build a Regional Safety Coalition with Law Enforcement, Emergency Responders, Educators, and Transportation Engineers	include Everyone Interested like planners
193		Distraction, cell-phone	Lobby for hands-free while driving law	
194		Seat-belt	Lobby for primary seat-belt law	
195		Alcohol	Lobby for tougher laws	
196			Lobby to mandate Smart Start Alcohol Analyzer with Camera on 2nd offence	
197			Lobby to revoke license after 3rd offense	
198	Source: ITE Transportation Engineering Handbook (Unknown Edition)			
199	Additions or Modifications by Bryan Costello, P.E.
